

Pramish Maharjan

Data Analyst & Analytics Engineer

Summary

Data Analyst & Analytics Engineer
Specializing in **Data Automation**, **Data Pipelines**, **Agentic AI** and **RAG Knowledge Systems**.

Looking for Apprenticeship contract or end of studies internship (6 months).

Contact

Phone - +33 783392817
Address - Paris, France

GitHub - github.com/pramishmaharjan

LinkedIn - linkedin.com/in/pramishmaharjan

Languages

French B1
English C2
Nepali Native
Hindi B1

Certifications

- [IBM Data Analyst](#)
- Microsoft Power BI Certification
- [Neo4j Certified Professional: Specialist](#)

Skills

- AI & System Design**
 - RAG pipeline, Vector Embedding
 - Tokenization, Context-Aware LLM
 - Context window management, AI integration
- Programming & Analytics**
 - Python, R
 - Pandas, NumPy, Scikit-learn, Streamlit,
- Databases & Data Engineering**
 - SQL, Graph databases, Vector DBs
 - SSIS, SQL Server, Data Warehousing
 - ETL & Data Pipelines
 - Data Modeling, Wrangling
- Business Intelligence**
 - Excel, Google Sheets-Automation
 - Power BI, Tableau, Amplitude

Education

DSTI School of Engineering Applied MSc in Data Analytics 2024 - 2026 CRM Data Management, SAS Viya, Predictive Analytics, Machine Learning, Scikit-learn, Data Pipelines.		ESCC Business School Bachelor's in Business Administration 2021 - 2024 Human Resources & Operations Management, Economics, Digital Marketing, SEO Strategies.	
Tribhuvan University Bachelor's in Computer Science and IT 2018 - 2021 Computer Networks & Data Structures.		Coursera IBM Data Analytics 2024 Python, SQL, Spreadsheets, Excel, Cognos, RDBMS, Data Processing, and Dashboard.	

Work Experience

Analytics Engineer (Finance Automation) Valeo 2025 Cergy, France	Independently developed and deployed “Jenga” an automated financial reporting pipeline in Google Apps Script, extracting and processing live financial data. Ensured long-term continuity of the “Jenga” automation code by developing a custom RAG AI agent (Gemini, Valeo AI), trained on self-produced video tutorials to empower the team with independent troubleshooting and maintenance. Saved over 270 hours per year for the finance controlling team by improving data transparency, scalability, and reliability. Standardized reporting across weekly, monthly, quarterly, MTP, and budget cycles with automated summaries.
IT Engineer Axiom Technologies 2021 - 2025 Paris, France	Managed critical infrastructure across enterprise data centers (Equinix, HCL, ETIX) for clients including Microsoft, Meta, Orange, and ANZ Bank, improving incident resolution efficiency by 30% and reducing downtime to under 3 minutes per incident.
Data Quality Specialist Cloud Factory 2016 - 2019 Kathmandu, Nepal	Achieved up to 95% accuracy in processed and annotated data for AI and machine learning, specializing in bill image and 3D sensor annotations for over 70 clients, including Expensify and AMP Robotics. Improved team accuracy by training new members within one week, utilizing Google Sheets and web tools for efficient project handovers.

Projects

Data Warehousing & ETL Power BI Dashboard Built an end-to-end ETL pipeline in SSIS and SQL Server with Power BI reports. - Created a 3-layer model (STA > ODS > DWH) and Star Schema for call-center data. - Analyzed 1M+ calls (857M minutes) showing Service Level Agreement (SLA) of 88% and Abandon Rate of 0.34% over 3 years.
Machine Learning Model for Diabetes Diagnosis Designed a complete end-to-end machine learning pipeline utilizing a dataset of 15,000 patients, achieving a 92% accuracy in predicting diabetes risk.
Modular Brain: Persistent AI Context & Memory System Built a modular data ecosystem that acts as a persistent memory layer for LLMs, ensuring consistency and reducing hallucinations across various AI tools.
AI-Powered RAG YouTube Video Analysis System Developed a retrieval-augmented generation (RAG) pipeline to transform YouTube channels data into a queryable knowledge base using vector embeddings and Chroma DB.
Historical Stock Data Visualization and Analysis Extracted actionable insights using moving averages, aiding in identifying 20% fluctuation patterns during peak trading periods for Apple and GameStop from 5 years of stock data.
Time Series Model for French GDP Prediction Created a model to predict French GDP growth from 1960 to 2015, achieving an R-squared value of 0.89, examined historical economic data to identify key growth patterns, improving trend forecasting accuracy by 25%.
